

OPTIMAX

Increase the filters life

In heavy environments, the pre-cleaner improves the air flow and the engine performance.

- Deletes highly concentrated mixed pollution.
- Reduces the filter change, extending it's useful life.
- Extends the equipment working times.
- The pre-cleaner doesn't need maintenance

The Pre-cleaner system

Air filter life is directly related to the amount of pollutants that enter to the engine intake system.

Installing an OPTIMAX maintenance free Pre-cleaner as the first step on the intake system, will remove the majority of heavier particles that go to the system.

For more demanding applications as dumps, Earth moving, mining and forestry work, OPTIMAX is extremely effective eliminating highly concentrated mixed pollution.

Phase 1

It consists of an ejective pre-cleaner 9000 series.

Phase 2

it consists of an external dust ejector, which significantly improves the performance.

Benefits

-  Extends the filter life – Is able to handle all kind off mixed contaminants, including mud, rain, leaves, sawdust, straw and dust.
-  Extension of the engine's life- reduces the air restriction, increasing the useful power.
-  Increase Availability.
-  Reduces operational cost.
-  Withstands difficult situations - Strong design of polymer construction offers the strength of steel without corrosion.

The OPTIMAX maintenance free pre-cleaners protect your equipments and help with the final results.
